

Relatório
Trabalho Final DAS

Trabalho Feito Por: Pedro Martins
Curso: Desenvolvimento Software
Professor: André Carvalhas

1) Primeiro passo foi criar um repositório no github.com e criar as branches (develop, master)

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere?

[Import a repository.](#)

Owner *

PedroMartins23 ▾

Repository name *

TrabalhoDAS ✓

Great repository names are short. TrabalhoDAS is available. Inspiration? How about probable-disco?

Description (optional)

☒ Public

Anyone on the internet can see this repository. You choose who can commit.

☐ Private

You choose who can see and commit to this repository.

Initialize this repository with:

Skip this step if you're importing an existing repository.

☐ Add a README file

This is where you can write a long description for your project. [Learn more.](#)

Add .gitignore

Choose which files not to track from a list of templates. [Learn more.](#)

.gitignore template: None ▾

Choose a license

A license tells others what they can and can't do with your code. [Learn more.](#)

License: None ▾

🔔 You are creating a public repository in your personal account.

Create repository

Comandos Para Criar as Branches:

```
git flow init
git branch develop
git checkout develop
git branch master
git checkout master
```

```
1 Pedro.Martins@DESKTOP-TAMFD97 MINGW64 ~/TrabalhoDAS (master)
2 git flow init
3 Pedro.Martins@DESKTOP-TAMFD97 MINGW64 ~/TrabalhoDAS (master)
4 git branch develop
5 Pedro.Martins@DESKTOP-TAMFD97 MINGW64 ~/TrabalhoDAS (master)
6 git checkout develop
7 Pedro.Martins@DESKTOP-TAMFD97 MINGW64 ~/TrabalhoDAS (master)
8 git branch master
9 Pedro.Martins@DESKTOP-TAMFD97 MINGW64 ~/TrabalhoDAS (master)
10 git checkout master
```

2) Segundo passo é criar uma Organização no github.com e colocar as regras de ordem correta.

Base permissions

Base permissions to the organization's repositories apply to all members and excludes outside collaborators. Since organization members can have permissions from multiple sources, members and collaborators who have been granted a higher level of access than the base permissions will retain their higher permission privileges.

Write -

Repository creation

Members will be able to create only selected repository types. Outside collaborators can never create repositories.

☐ Public

Members will be able to create public repositories, visible to anyone. [Why is this option disabled?](#)

☒ Private

Members will be able to create private repositories, visible to organization members with permission.

Save

Repository forking

☐ Allow forking of private repositories

If enabled, forking is allowed on private and public repositories. If disabled, forking is only allowed on public repositories. This setting is also configurable per-repository.

Save

Pages creation

Members will be able to publish sites with only the selected access controls.

☒ Public

Members will be able to create public sites, visible to anyone.

☐ Private

Members will be able to create private sites, visible to anyone with permission. [Why is this option disabled?](#)

Save

Integration access requests

☒ Allow integration requests from outside collaborators

Outside collaborators will be able to request access for GitHub or OAuth apps to access this organization and its resources.

Save

Admin repository permissions

Repository visibility change

☐ Allow members to change repository visibilities for this organization

If enabled, members with admin permissions for the repository will be able to change its visibility. If disabled, only organization owners can change repository visibilities.

Save

Permission coloquei **Write**

Repository Visibility Change – **Desativei**

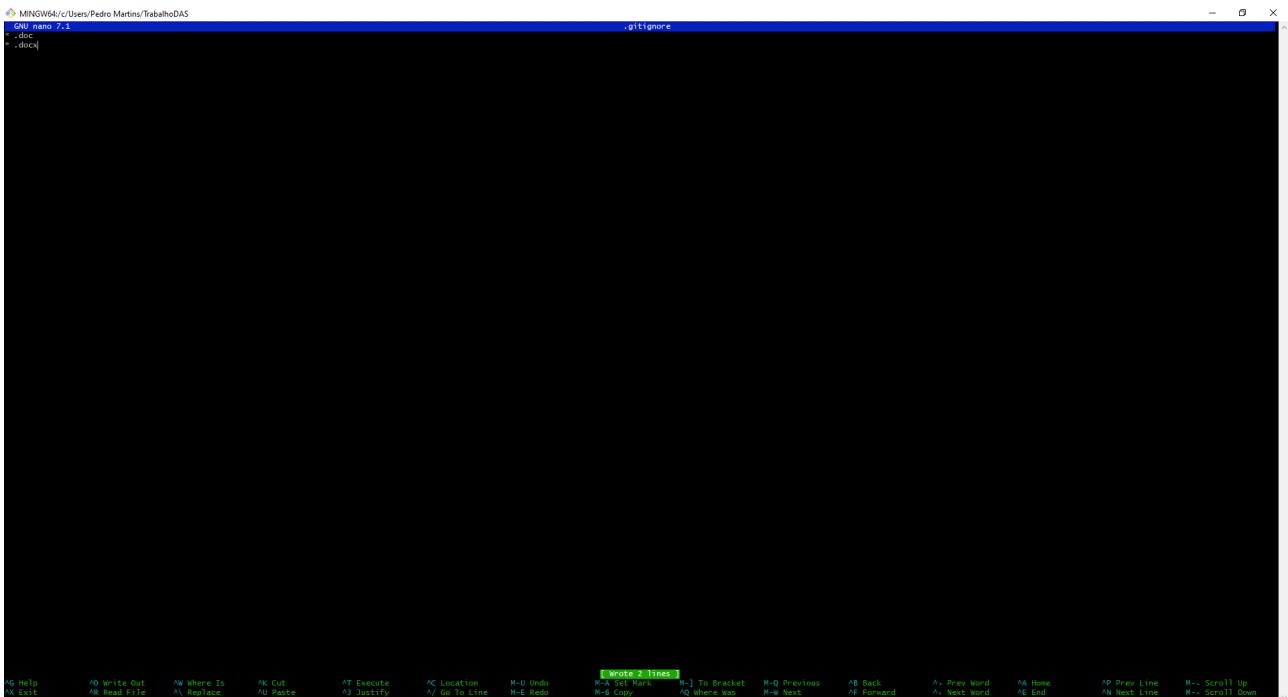

3) Tornar obrigatório a revisão de código antes de um Pull Request ser aprovado

Protect matching branches

- ☒ **Require a pull request before merging**
When enabled, all commits must be made to a non-protected branch and submitted via a pull request before they can be merged into a branch that matches this rule.
- ☒ **Require approvals**
When enabled, pull requests targeting a matching branch require a number of approvals and no changes requested before they can be merged.

Required number of approvals before merging: 1 ▼
- ☐ **Dismiss stale pull request approvals when new commits are pushed**
New reviewable commits pushed to a matching branch will dismiss pull request review approvals.
- ☒ **Require review from Code Owners**
Require an approved review in pull requests including files with a designated code owner.

4) Adicionar um ficheiro .gitignore de maneira a ignorar ficheiros, .doc, .docx

The screenshot shows a nano editor window titled ".gitignore" with the following content:

```
.doc  
*.docx
```

The bottom status bar of the nano editor displays various keyboard shortcuts for navigation and editing.

```
Pedro Martins@DESKTOP-TAMFD97 MINGW64 ~/TrabalhoDAS (master)  
$ nano .gitignore  
  
Pedro Martins@DESKTOP-TAMFD97 MINGW64 ~/TrabalhoDAS (master)  
$ ls -a  
./ ../ .git/ .gitignore
```

Esta screenshot mostra os comandos para fazer um push para o repositório

```
Pedro Martins@DESKTOP-TAMFD97 MINGW64 ~/TrabalhoDAS (master)
$ cat .gitignore
*.doc
*.docx

Pedro Martins@DESKTOP-TAMFD97 MINGW64 ~/TrabalhoDAS (master)
$ git status
On branch master
Your branch is up to date with 'origin/master'.

Untracked files:
  (use "git add <file>..." to include in what will be committed)
        .gitignore

nothing added to commit but untracked files present (use "git add" to track)

Pedro Martins@DESKTOP-TAMFD97 MINGW64 ~/TrabalhoDAS (master)
$ git add .
git: 'add.' is not a git command. See 'git --help'.

The most similar command is
    add

Pedro Martins@DESKTOP-TAMFD97 MINGW64 ~/TrabalhoDAS (master)
$ git add .
warning: in the working copy of '.gitignore', LF will be replaced by CRLF the next time Git touches it

Pedro Martins@DESKTOP-TAMFD97 MINGW64 ~/TrabalhoDAS (master)
$ git commit -m "configuracao do gitignore"
[master d6f2529] configuracao do gitignore
 1 file changed, 2 insertions(+)
 create mode 100644 .gitignore

Pedro Martins@DESKTOP-TAMFD97 MINGW64 ~/TrabalhoDAS (master)
$ git push origin master
Enumerating objects: 4, done.
Counting objects: 100% (4/4), done.
Writing objects: 100% (3/3), 277 bytes | 277.00 KiB/s, done.
Total 3 (delta 0), reused 0 (delta 0), pack-reused 0
